

Quick review guide

A private shared workspace for parents and trusted caregivers to coordinate daily care, goals, progress, updates, and support.

How CareCircle works

1 Parent creates the circle

The parent creates a private care space, goals, interventions, and recurring daily-care items.

2 Caregiver joins by invitation

The caregiver verifies the invited email address, accepts access, and sees the shared plan.

3 Everyone stays coordinated

Members complete care, record outcomes, share handoffs, and receive private activity notifications.

What is included

1 Daily care

Recurring daily and weekday checklists with completion history and attribution.

3 Progress

Structured outcomes show whether support is decreasing and goals are being reached.

5 Community

A privacy-conscious place to exchange questions, tips, resources, and milestones.

2 Shared care plan

Measurable goals and step-by-step interventions that caregivers can follow.

4 Handoffs

Updates, requests, replies, and noteworthy events keep the circle coordinated.

6 Activity and push

A shared audit trail plus optional private web-push notifications.

Private by default. A care circle is visible only to verified, invited members. Push notifications use generic text so private care details do not appear on a lock screen.

Set up care and track the day

Parents have full management access. They define the shared plan; caregivers follow it and contribute daily observations.

1 Create the care plan

Add measurable weekly goals and practical interventions with clear steps.

2 Add recurring care

Create daily or weekday templates with a time and concise instructions.

3 Complete Today's Care

Each completion records who did it and when. An item can also be reopened with Undo.

Today's Care shows pending and completed items with member attribution.

4 Record structured progress

Choose Independent, One prompt, or Extra support and add an observation. Daily checklist completion does not automatically change weekly goal progress.

Weekly progress clearly explains how structured outcomes count toward the selected goal's target.

Join safely and collaborate

Caregivers receive only the access granted through a matching verified invitation. They cannot change parent-managed goals or interventions.

1 Open the invitation email

Use the Open CareCircle link, create or sign in to the invited account, and verify the same email address.

The invitation screen identifies the private care circle and the role being granted.

2 Accept the invitation

Select Accept invitation. Existing care items, updates, and plan details become available immediately.

3 Use the shared plan

Complete assigned care, add progress observations, reply to updates, and participate in the community. Parent-only editing controls remain hidden.

The caregiver Care Plan view is read-only and clearly explains that only a parent can make changes.

What to verify in 10 minutes

The preview is private and separate from production. Production remains unpublished until the MVP is approved.

Activity records important changes. Optional web push uses generic lock-screen text to protect private care information.

Suggested review checklist

- ☐ Create or sign in to a parent account and open the care workspace.
- ☐ Review Today's Care, the care plan, weekly progress, updates, community, activity, and circle access.
- ☐ Invite a second verified email as a caregiver and accept the invitation in a separate browser window.
- ☐ Complete a care item as the caregiver and confirm the parent sees the result and attribution.
- ☐ Post an update or progress outcome and confirm it appears in shared history and Activity.
- ☐ Enable web push in normal Chrome or Edge, then trigger a new action from the other account.
- ☐ Check the app on both desktop and phone-size screens, including the install option for the PWA.

Approval. After reviewing the private preview, confirm whether the CareCircle MVP is approved for production publishing.
