

CareCircle

Getting started and daily use

Final tester QA complete on desktop and phone. The finished application saves your changes. This guide is separate from the earlier sample demo.

Open the app: <https://carecircle-app-live.web.app/>

New parent: create your account and circle

1. Open the app and select **Create account**. Enter your name, email and a password of at least six characters.
2. Open the verification email, verify your address and return to the app. Follow the verification controls shown there. Check Spam if the email is missing.
3. Select the parent setup when you have no care circle. Enter your **child's first name** and **Your relationship**, then select **Create private care space**.
4. Open **Care Plan** to create goals, practical interventions and recurring daily-care items.
5. Open **Circle** and create an invitation using the caregiver's email.

Already registered?

Sign in with your existing email and password. Use **Forgot password?** on the sign-in screen if you need a reset email. No new account is needed.

If you belong to multiple circles, choose the correct child in the **Care circle** dropdown. Your Parent or Caregiver role can differ between circles.

Joining as a caregiver

1. Open the **latest invitation email** and follow its CareCircle link.
2. Sign in or create an account with **the exact email address that received the invitation**.
3. Verify that email and return to the app to review and **accept the pending invitation**.
4. Choose the invited child's care circle. An existing Parent role in another circle does not change your Caregiver role here.

If the invitation does not appear

Check that you are signed in with the invited email and have completed verification. If necessary, sign out and use the correct account. Check Spam for invitation and verification messages.

Invitations last **seven days**. If an invitation is expired or revoked, ask the parent to create a new one. If the parent removes a caregiver, a **new invitation** is required to restore access.

Roles and privacy

Parent: manages the care plan, recurring items, caregivers and invitations; reviews daily care, progress, updates and activity.

Caregiver: follows the parent-managed plan, completes pending daily care, records progress and shares updates. Parent-only care-plan and membership controls are unavailable.

Community: posts are shared with registered members, beyond your private care circle. Share only information you intend that audience to see; keep children's private care details out of posts.

Use your own account and never share your password. Actions in the live app persist.

Your seven daily tabs

Today

Caregivers complete pending tasks; parents review completion. Task completion and goal progress are separate.

Care Plan

Parents add or edit goals, practical interventions and recurring care schedules. Caregivers follow the plan without editing it.

Progress

Record structured goal outcomes and observations, then review the shared history and weekly progress.

Updates

Share handoffs, observations and requests with your care circle.

Community

Share questions, tips, resources and milestones with registered members; reply, support or report posts.

Activity

Review notifications and use **Mark all as read** to clear unread items. Optional web push depends on browser/device support and permission.

Circle

Parents invite caregivers, revoke pending invitations and remove caregiver access with confirmation. Existing care records/history remain when access is removed.

Care circle dropdown

Select the correct child's circle before making changes. On a phone, all seven tabs are available; scroll down for full page content.
